

Reusable Face Shield

We fabricated this out of clear Vinyl and HDPE so that it can be cleaned and re-used.

Please **do** wash and re-use it wherever possible (instructions below).

Please **do not** share yours with others. Thank you.

DO USE any of the following cleaners:

- Warm Soapy Water
- Hydrogen Peroxide
- Bleach water (0.5% mixture often made with 9 parts water and 1 part 5% bleach)
- Alcohol (Drug or Liquor Store varieties are fine so long as it's clear and at least 50% alcohol or 100 proof)

DO NOT USE excessive heat:

Sorry, no Autoclave. Even a hairdryer may be too hot for the visor.

Suggested cleaning technique:

- Wipe down between patients.
- Wash at end of shift then let air dry.

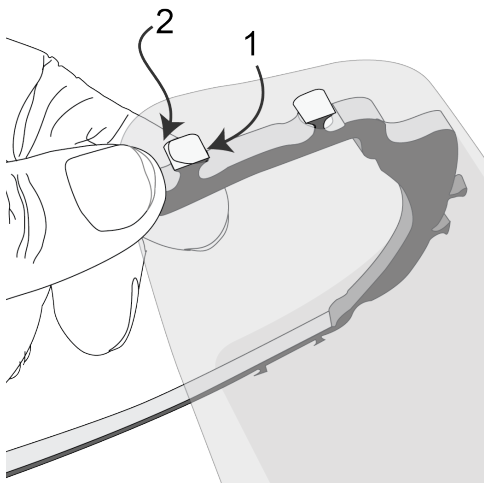

TIP: Do not wear your shield while it is still wet with sanitizer.

ASSEMBLY:

There are 6 holes along the top edge of the clear visor and 6 tabs along the outside edge of our U-shaped frame.

Slip the tabs through the holes by:

1. Hooking one side of the hole over the tab
2. Push the other side down into place by pinching it down against the frame like so:

Now... A word from our community:

Our design is based on v3 of the 3DVerkstan 6 hole design (North American version) and released under a Creative Commons BY-SA License. For more info visit: <https://milwaukeeemakerspace.org/>
